DIGITAL RADIOGRAPHY SYSTEM PROMISES PATIENT SATISFACTION

Advanced Orthopaedics and Sports Medicine (OSM) is thrilled to announce that they have upgraded their onsite imaging technology to better serve their patients. The North Cypress location of Advanced OSM boasts a state-of-the-art Viztek Digital Radiography (DR) system, which promises to provide a quick, simple and convenient option for patients to get tests and receive results.

With the significantly reduced time necessary to take and process images, the Viztek DR dramatically reduces a patient's visit time compared to traditional Xrays or even Computer Radiography (CR). In addition, patients have the freedom to stand, sit or lay in any position that they feel comfortable due to the console's maneuverability. The Viztek DR system also provides superior image quality allowing for greater visualization of soft tissue and bones. Coupled with the single unit console design of the machine, this innovative system provides doctors with the ability to increase productivity, decrease error and most importantly diagnose problems more quickly and accurately. With these innovative features, patients are sure to have an improved experience at the facility.

Speaking on behalf of the physicians at Advanced Orthopaedics and Sports Medicine Dr Mack said, "We are excited to have added the new Viztec DR to our radiology suite. This equipment significantly reduces the time required for patients receiving xray tests, improves workflow, and improves the quality of images available to our physicians and medical staff."

With this advanced technology available in house, patients now have the luxury of visiting Advanced Orthopaedics and Sports Medicine and having all of their orthopedic medical needs met in one convenient location at the North Cypress office.
